

ISO 50001 complete

Our ISO 50001 complete package provides everything you need to kick-start your Energy Management System (EnMS) and fulfil the requirements of ISO 50001:2011. This package contains an 'off the shelf' EnMS and is stored within our online system that allows you to manage user access and document version history.

Save time & money

This package comes pre-populated with a comprehensive set of ISO 50001:2011 procedures and templates along with a management system index for you to use.

All you need to do is modify these to reflect the way your organisation operates and you will very quickly have all the documents you need for your Energy Management System (EnMS).

Reduce administration

Our online system will manage all your documented information for you, ensuring safe storage and version control.

Flexible

The online system can also accommodate your existing management system documents. The system stores these in a series of organised folders, matching the standard, making it simple to find the one you want.

Control access

You can control who is able to edit documents and who can only view them. The system is web-based and can be accessed anytime, from anywhere.

The system also ensures that only the latest version of a document is visible to users, thus avoiding confusion and potential nonconformities.

Email & telephone support

The consultants at Loreus Ltd can provide support to help you implement your EnMS & answer any questions you may have.

Achieve certification

Our ISO 50001 package will help you successfully achieve certification to ISO 50001:2011.

Detailed examples

Our package also provides you with detailed examples that you can follow, created by the expert consultants at Loreus.

What the package contains

All of the required ISO 50001:2011 documented information

The primary feature of the ISO 50001 complete package is a collection of written documents which fulfil all requirements of the ISO 50001:2011 standard. This 'off the shelf' EnMS will save you 100's of hours, compared to creating all of the documents from nothing. This package has been created by our team of experienced energy management consultants.

The package has been designed so that you can either edit the procedures to match processes currently used by your organisation, or adopt the processes described in each of the procedures.

Tried & tested

For over 15 years, Loreus Ltd have assisted organisations to successfully implement EnMS's & gain third party certification, across a wide variety of sectors.

System folder structure

All of the documented information is organised according to a file structure which mimics the ISO 50001:2011 standard;

- General requirements
- Management responsibility
- Energy policy
- Energy planning
- Implementation & operation
- Performance evaluation
- Checking
- Management review

Example procedures

The package includes all of the documents and procedures needed to achieve ISO 50001:2011 standard. The list below gives you an example of the documents contained within the package;

- EnMS manual
- EnMS management structure
- Sample EnMS policy
- Environmental policy
- EnMS internal audit programme
- 1.2. Legal & other requirements related to energy use
- 2.2. Competence, training & awareness
- 4.2. Energy policy
- 4.5.3. Communication
- 4.5.4. Documentation
- 4.5.5. Operational control

All of the example documents have been created using the experience and best practice used by Loreus consultants, to provide you with an excellent starting point for meeting the standard's requirements.
